Overview

- **Sprint Duration:** July 8 - July 22
- **Total Points Completed:** 8 points
- **Points Remaining:** 32 points

Chart Interpretation

- **Remaining Work Line (Blue):** This line shows the actual progress of the sprint. Initially, it starts at 18 points and fluctuates slightly before stabilizing at 8 points completed with 32 points remaining.
- **Guideline (Gray):** The ideal burndown rate to complete all tasks by the end of the sprint. It shows a steady decline from 18 points to 0 points by July 22.

Key Observations

- **Scope Increase:** The sprint scope increased by 3 points during the sprint, as indicated by the added 3 points from 1 issue.
- **No Points Removed or Modified:** There were no points removed or modified during this sprint, showing that all added work was retained until the end.

Comparison with Previous Sprint

- **Sprint 2 Summary:**
  - **Duration:** June 24 - July 8
  - **Total Points Completed:** 28 points
  - **Points Remaining:** 19 points
  - **Scope Increase:** 47 points
  - **Issues Added:** 10
  - **Issues Removed/Modified:** 0

Comparison:

- **Velocity Change:** The velocity decreased from 28 points completed in Sprint 2 to 8 points completed in Sprint 3. This significant decrease can be attributed to better task management and accurate estimation in Sprint 3. The decrease in the number of points added (from 47 to 3) also indicates a more controlled and focused approach in this sprint.
- **Task Management:** Unlike Sprint 1, where task management was incorrect, Sprint 3 showed proper task breakdown, estimation, and tracking, contributing to more reliable data and progress tracking.
